Company Profile

Endress+Hauser is one of the largest instrument manufacturers in the United States' industrial automation industry, specializing in measurement instrumentation, services & solutions for the chemical, food & beverage, oil & gas, water & wastewater, life sciences, power & energy, primaries and pulp & paper sectors. Endress+Hauser, a Switzerland-based company, first began operations in the U.S. in 1970.

Endress+Hauser manufactures Flow, Level, Pressure, Temperature and Analytical instrumentation. This strong manufacturing base is complimented with a complete network of sales and service locations to support customers – wherever their instruments are installed. Project Management and Engineering Services are also available, as well as Main Instrument Vendor (MIV) Services where Endress+Hauser is contracted as a partner to provide a total solution for a project including all instrumentation and valves. From feed to operation, customers can save time, reduce cost and mitigate risk with one partner to ensure consistency and avoid ambiguities.

Efficiency, system availability and immediate access to data dominate the current mindset of the chemical industry. Endress+Hauser continues to innovate and reshape our offering to align with the trends and technologies of the industry.

Safety

Increasing the safety of people, the environment and assets while ensuring ongoing production is a top priority to chemical manufacturers. Endress+Hauser supplies the broadest portfolio fulfilling functional safety (up to SIL3) and meeting

international standards and hazardous area approvals (ATEX, IECx, FM/CSA, NEPSI, TIIS, INMETRO, IEC61508). Certified Safety Engineers at Endress+Hauser can also design safety circuits (Ex and SIL) and help customers select the best products and solutions for their applications. An experienced Service team rounds out Endress+Hauser's safety offering by providing advanced diagnostics, calibration, optimization and training services.

Technology

Attaining peak performance in your process with reduced operational costs can be crucial for your daily business. Balancing production efficiencies while maintaining product quality, according to your customer's requirement, is not an easy task. However, Endress+Hauser can help you obtain reliable and accurate data to achieve this goal.

Project Management

As a main instrument vendor (MIV) with global presence, Endress+Hauser has project management expertise available locally to support you in meeting deadlines and managing costs.

A knowledge-based formula

It is a challenge to find the optimum balance between demands such as productivity, profitability, risk reduction and good environmental management. Endress+Hauser has the industry knowledge to support you in attaining peak performance in all these areas.
